

The M/K Systems 900 series Manual Sheet Former

- Large 11"x11" hand sheets
- Excellent control over formation
- Mixing controlled by air, not a blade
- White water recirculation system
- Repeatable hand sheets
- Precise fixed amounts of pulp added
- Removable drainage tank
- Very easy to use – very little training required
- Includes air compressor

Making large hand sheets with the M/K Systems manual sheet former is easily accomplished. This modern sheet former provides timed amounts of pulp infusion, excellent turbulent mixing, adjustable air-turbulent mixing, as well as optional white-water tank recirculation.

The device is predicated on early M/K Systems technologies but has been upgraded in the most important ways that are ideally suited for research. Now the user can easily drain rapidly to determine its impact on formation. Additionally with large sheets (11"x11"), there is plenty of material for analysis with each sheet produced.

This product also utilizes a high-rate recirculation line that results in your raw pulp mixture marinating the same consistency from start to finish. The unique M/K design keeps the pulp well-circulated until the moment when pulp is added to the mixing deckle. Additionally, the user can utilize the precise timed-infusion of pulp to insure the correct basis weight sheets with ease. Contact M/K Systems for more information.

System requirements
110V/20 amps, typical water source,
0.8m wide x 0.8m long x 1.5m tall
